JOB PERFORMANCE REPORT

State of: Idaho Name: SALMON AND STEELHEAD INVESTIGATIONS

Project No.: F-73-R-10 Title: Estimated 1987 Spring Steelhead Season
Harvest and Effort (Telephone Survey)

Subproject: II

Study: I

Job No: 1

Period Covered: March 1, 1987 to February 29, 1988

ABSTRACT

An estimated total of 19,315 anglers out of 26,987 steelhead permit holders fished 106,109 days in the spring season of 1987. The estimated number of steelhead landed by anglers reached an estimated 41,435 fish. Anglers kept 19,805 steelhead while releasing 21,630 steelhead composed of 13,152 wild fish and 8,478 hatchery steelhead.

Author:

Thomas J. McArthur Fisheries Staff
Biologist

OBJECTIVE

To obtain spring estimates of steelhead harvests by major drainage.

TECHNIQUES USED

In July 1987, spring season steelhead harvest and fishing efforts were obtained from a telephone survey, as reported by Pollard (1985). A random sample of 4,600 (17%), out of the 26,897 steelhead permit holders was obtained from the State Auditor's IBM mainframe computer using a program SAS (Statistical Analysis Systems 1982).

Each angler selected for the survey was mailed a preliminary letter explaining the purpose of the survey and the questions to be asked (Figure 1). The letter was followed within two weeks by a phone call from one of the five telephone interviewers. The telephone interviewers were trained to solicit complete replies and read from a standard script (Figure 2) so that the questions were asked of the interviewees in the same manner. A list of the names of the fishing holes was also provided to the interviewers so that the correct section could be determined (Appendix I).

The telephone list was gone through completely four times by the interviewers in an effort to contact as many anglers as possible within the one month period of the survey. Each completed telephone response or completed survey letter was immediately entered in the Idaho Department of Fish and Game's Honeywell 695 minicomputer on DEF II. After the survey was completed, the data was downloaded from the minicomputer to a personal computer into a dBase III+ file. Manipulation of the data was accomplished within dBase III+. The estimates of fishing pressure and harvest was accomplished using LOTUS and SYSTAT.

FINDINGS

The spring steelhead fishing season in 1987 was open from January 1 through April 30. Daily bag limits allowed either 2 or 3 fish per day, 4 or 9 in possession, and 10 or 20 per season depending on the river drainage (Appendix II). Also in the spring of 1987, anglers were required to release wild steelhead, as determined by a dorsal fin height or the presence of an adipose fin.

A total of 26,897 steelhead permits were sold in the spring of 1987 with 3,129 (11.6%) permit holders contacted for the telephone survey. The sample was composed of 2,718 (86.9%) residents and 411 (13.1%) nonresidents. An estimate of the composition of steelhead angler population was between 85.4% and 88.1% residents with 11.8% and 14.5% being nonresidents, at .95 confidence interval. The expanded estimates for resident permits was 23,374 (+/- 363) and for nonresident permits 3,523 (+/- 363).

600 South Walnut • Box 25
Boise, Idaho 83707

June, 1987

We are seeking information regarding steelhead fishing in Idaho during the 1987 spring steelhead season (January 1 through April 30, 1987). Your assistance in answering the following questions will help the future of steelhead fishing. Please take a few minutes to fill in the answers to the questions below and place this letter near your telephone. PLEASE DO NOT RETURN THIS LETTER BY MAIL (unless you have no telephone). In the near future, you will receive a telephone call asking the following questions:

1. Did you fish for steelhead in Idaho during the 1987 spring season?

Yes _____ No _____

2. How many days did you fish in each river section? (See river section list on back of this sheet.)

Number of days fished	River	Section number
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

3. Did you catch one or more steelhead (including fish released)?

Yes _____ No _____

4. If you caught and released steelhead, how many did you release, by river section?

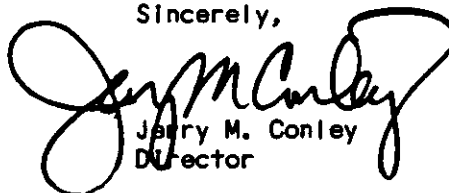

Number released		River	Section number
Hatchery fish	Wild fish		
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

Figure 1. Preliminary letter sent to steelhead permit buyers that were selected for 1987 spring harvest survey.

5. If you caught and kept steelhead, how many did you harvest by date and river section? (Check dates recorded on your steelhead permit.)

Figure 1. Continued.

Hello, this is _____ with the Idaho Department of Fish and Game calling for _____.

Your name was selected from among those who purchased a permit to fish for steelhead in fall 1987 and I would like to ask you a few questions so we can estimate the catch of steelhead during the spring season.

Did you fish for steelhead in Idaho between January 1, and April 30, 1987?

[No]

I have no more questions. Thank you for your help.

[Yes]

How many days did you fish in each river section?

Days Section#

Did you catch any steelhead including any that you might have released?

[No]

I have no more questions. Thank you for your time and assistance.

[Yes]

Did you catch and release any steelhead?

[Yes]

How many steelhead released were hatchery fish and how many were wild fish, by section.

[No]

[Go to next question.]

Did you catch and keep any steelhead during the 1987 spring season?

[Yes]

What was the date and river section for each fish kept?

[No]

[Go to closing statement.]

These are all the questions I have. On behalf of the Idaho Department of Fish and Game, I thank you for your help.

Figure 2. Script used by telephone interviewers.

A total of 19,315 (71.8%) anglers fished for steelhead in the spring of 1987 (Table 1). The number of residents participating was 16,426 (70.3%) while nonresidents participating was 2,889 (81.7%). The number of resident and nonresident anglers that fished more than one river section was calculated by summing the individual anglers participating in individual sections, 25,224 then subtracting 19,315 yielding 5,910 (30.1%)(Table 2).

Total effort was 106,109 days with resident anglers fishing 91,307 days while nonresidents fished 14,802 days (Tables 1, 2, 3, 4). The mean number of days fished (including the anglers that did not fish) was 4.0 overall, with nonresidents averaging 4.3 days and residents averaging 3.9 days. For all distributions (Resident, Nonresident, and combined), a mode of two days occurred (Figures 3,4,5).

The number of anglers catching at least one fish was 7,994 (41.4%). The number of resident anglers meeting the same criteria was 6,670 (40.6%) while the nonresidents in the same category totaled 1,324 (45.8%).

The steelhead harvest in the spring of 1987 increased to 19,805, compared to 1985 (13,642) (Hall-Griswold 1987) and 11,699 in 1986 (McArthur 1988). Residents harvested at total of 16,840 steelhead while nonresidents harvested 2,965. The distribution of the number of fish harvested by individual anglers, resident and nonresident combined, is shown in Figure 6. There was no difference in harvest distributions of resident and nonresident anglers.

Among the major drainages, the Salmon River received the most pressure (60,678 days) and the highest number of fish caught 23,967 including the catch-and-release fish. These results also mimic the 1986 effort and harvest estimates (McArthur 1988). March was the most productive spring month, resulting in 8,767 fish being harvested (7,264 by residents and 1,503 by nonresidents)(Tables 5, 6, 7). The highest catch rate occurred on the Snake River sections with an average of 1.8 days per fish for resident anglers. Nonresidents averaged 4.6 days per steelhead in the Snake River sections.

In the spring of 1987, regulations for steelhead fishing encouraged or required the release of wild steelhead. Anglers released 21,630 (8,478 hatchery fish and 13,152 wild fish) while harvesting 19,805. This pattern of releasing more fish than harvesting is similar to the previous year and probably resulted from increasing numbers of steelhead returning to Idaho.

Table 1. Estimate angler participation and harvest in the Idaho spring steelhead fishery, 1987.

	Estimate	Upper confidence interval	Lower confidence interval
Number that did fish	19,315	19,796	18,817

Appendix I. List of steelhead fishing holes within a given section.

SECTIONS

1. Snake River, below Salmon River:
Asotin, Heller Bar, Grande Ronde, Lime Point, Captain John Creek
2. Snake River, above Salmon River to Hells Canyon Dam:
Imnaha, Pittsburg Landing, Doug Bar
3. Clearwater River, below Orofino Bridge:
Lewiston, Potlatch Creek, Hog Island, Lapwai Creek, Myrtle Beach, Cherry Lane, Lenore, Peck, McGill Hole, Pink House, Spalding Park, Slaughterhouse, Cat Hole, Teepee Hole, KOA, Bevenlins
4. Clearwater River, above Orofino Bridge:
Greer, Fish Hatchery Hole, Kamiah, Kooskia, Five-Mile, Six-Mile, Miller Hole, Sawmill
5. North Fork Clearwater River from mouth to Dworshak Dam
6. Middle Fork Clearwater River:
Clearwater to Clear Creek
7. South Fork Clearwater River:
Mt. Idaho Bridge, Mile Post 21
10. Salmon River, below Whitebird Creek:
Cottonwood Creek, Graves Creek, Deep Creek, Hammer Creek, Divide Creek, Rice Creek, Pine Creek, Snow Hole, Slide Hole, Deer Creek Bridge
11. Salmon River, Whitebird Creek to Little Salmon:
Whitebird Creek, Silver Bridge on Time Zone, Blackhawk Bar, Lucille, Slate Creek, Skookumchuck, Race, Fiddle, John Day Creek, Chair Creek, Riggins Boat Ramp
12. Salmon River, Little Salmon to Vinegar Creek:
Wind River, Vinegar Creek, Luke and French Creek, Spring Bar, Riggins Hot Springs, Allison Creek, Shorts Bar, Partridge Creek
13. Salmon River, Vinegar Creek to South Fork:
Shepp Ranch, Bull Creek, Warren Creek, Mann's Creek, South Fork Hole
14. Salmon River, South Fork to Middle Fork:
Mackay Bar, China Bar, Sabe Creek, Whitewater Ranch, Corn Creek, Chamberlain Creek, Buckskin Bills, Five-mile Creek, Bargamin Creek, (Salmon Falls - Boat), Long Tom Bridge, Big Mallard Creek, Little Mallard Creek, Bear Creek Hole, Smith Gulch

Appendix I. Continued.

- 15. Salmon River, Middle Fork to North Fork:**
Owl, Pine, Spring Creek, Indian, Dump, Panther Creek,
Deadwater, Shoup, Colson Creek, Rams Head Lodge, Dutch Oven,
Cove Creek, Newland Ranch, Trapper Gulch, Ebenizer Flats,
- 16. Salmon River, North Fork to Lemhi River:**
Ramshorn, Salmon, Carmen, Lemhi, Fourth of July Creek, Kriley,
Red Bluff
- 17. Salmon River, Lemhi River to Pahsimeroi River:**
Ellis Down to Lehmi, Pahsimeroi, Dug Out, Shoup Bridge,
Williams Lake, Twelvemile Creek, Iron Creek, Hot Creek, Cronks
Canyon, Boat Hole, Sevenmile Creek, Elk Bend, Midway
- 18. Salmon River, Pahsimeroi River to East Fork:**
Challis, Warm Springs Creek, Bayhorse, Morgan Creek, Chivers
Access, Highway 93 Bridge
- 19. Salmon River, above the East Fork:**
Basin Creek Down, Sunbeam Dam, Clayton, Robinson Bar, Yankee
Fork, Thompson Creek, Squaw Creek, Stanley, Valley Creek,
Redfish Lake Creek, Rough Creek, Holman Creek, Deadmans Rock,
Ranger Hole, Torreys
- 20. Little Salmon River:**
Rapid River, Pollock, Stinky Hot Springs, Boulder Creek
- 27. Snake River, Oxbow:**
- 28. Boise River:**

ETHICS AND COURTESY

Improved steelhead runs to Idaho have caused tremendous increases in numbers of anglers. This increase in anglers has created litter problems and conflicts between anglers. Your help is needed to assure that you and other anglers have an enjoyable fishing trip.

PLEASE:

Do not litter. Place lure and bait packages, beverage containers and other trash in proper receptacles or carry it out with you. Use sanitary facilities wherever possible.

Avoid conflicts with other anglers. If someone else is fishing a hole, wait your turn. Boat anglers should avoid crowding bank anglers or crossing lines. Bank anglers should recognize that often boats must pass through narrow slots close to shore. Try not to restrict their passage. Power boats should avoid floatboats and wading anglers and be aware of the impacts of speed, noise and wakes.

Littering, trespass and human wastes are leading to loss of fishing access. Conflicts between anglers may lead to restrictions on fishing methods. Protect your fishing and help assure that everyone has an enjoyable experience by practicing courtesy.

IDAHO 1987 SPRING

Steelhead Seasons and Regulations

Resident Fishing License	\$18.50
Nonresident Fishing License	\$36.50
Steelhead Permit (Lic. Required)	\$5.50

GENERAL INFORMATION

LICENSES — STEELHEAD PERMITS

Anyone, except those expressly exempt, must have a valid fishing license and steelhead permit to fish for, reduce to possession, or catch and release steelhead.

Children (including nonresident children) under the age of 14 are exempt from purchasing steelhead permits. They may fish without permits if they are accompanied by a valid permit holder, provided that any fish caught must be recorded on the permit holder's card and counted in the permit holder's legal bag and possession limit.

A resident child under 14 may purchase a permit so that he may catch his or her own limit of steelhead. Any person who does not qualify as a resident must have a nonresident season fishing license before purchasing a steelhead permit.

In order to qualify for resident status, a person must be domiciled in the State for at least six months.

FISHING IN BOUNDARY WATERS

SNAKE RIVER BETWEEN IDAHO AND OREGON OR WASHINGTON: The holder of a valid Idaho fishing license may fish the Snake River where it forms the boundary between the states of Idaho and Oregon or Washington, subject to the fish and game laws of Idaho but may not fish from the shoreline, sloughs or tributaries on the Oregon or Washington side. An Oregon or Washington license holder has the same rights and restrictions with reference to the Idaho side.

Any angler who fishes on the Snake River or any other water forming an Idaho boundary is entitled to only one daily bag limit per day regardless of the number of licenses he may possess.

SEASONS AND LIMITS

- Daily bag, possession, and season limits for the Snake, Salmon and Clearwater rivers are not cumulative limits. For example, an angler may take a total of 20 steelhead during the Spring 1987 season. However, only 10 of those fish may be taken from the Boise River.

SALMON RIVER from its mouth upstream to Long Tom Creek near the Middle Fork Salmon River, including the Little Salmon from its mouth upstream to the highway 96 bridge near Smokey Boulder Road.

Season: January 1, 1987 through March 31, 1987.

Limits: 3 per day
9 in possession
20 per season

Salmon River from Long Tom Creek to the mouth of Redfish Lake Creek.

Season: January 1, 1987 through April 30, 1987.

Limits: 3 per day
9 in possession
20 per season

Special Restrictions: Steelhead are the only game fish that may be reduced to possession between Horse Creek and North Fork Salmon River during steelhead season.

BOISE RIVER from its mouth upstream to Barber Dam.

Season: January 1, 1987 through April 30, 1987.

Limits: 2 per day
4 in possession
10 per season

Barbless hooks are not required to fish for steelhead in the Boise River.

SNAKE RIVER from the Washington state line at the confluence of the Snake and Clearwater rivers upstream to Oxbow Dam, including that portion of the the Clearwater River from its confluence with the Snake River upstream to the Memorial Bridge of U.S. Highway 12 at Lewiston.

Season: January 1, 1987 through April 30, 1987.

Limits: 3 per day
9 in possession
20 per season

- Barbless hooks are not required to fish for steelhead above Hells Canyon Dam.

Special Restrictions:

- Fishing from a boat within 150 yards of Hells Canyon Dam is prohibited.

CLEARWATER RIVER AND MIDDLE FORK CLEARWATER RIVER from the Memorial Bridge of U.S. Highway 12 at Lewiston upstream to a posted line 150 yards downstream of the mouth of Clear Creek; North Fork Clearwater River from its mouth upstream to 100 yards below Dworshak Dam; South Fork Clearwater River from its mouth upstream to the confluence of American and Red rivers.

Season: January 1, 1987 through April 30, 1987.

Limits: 3 per day
9 in possession
20 per season

Special Restrictions:

- Fishing from the shoreline along the perimeter of Dworshak National Fish Hatchery is prohibited.
- Fishing from any watercraft is prohibited between a posted line 100 yards upstream from the mouth of the North Fork Clearwater River and the Ahsahka Highway Bridge.
- Fishing from motorized watercraft is prohibited from the Clearwater River Bridge at Orofino upstream to the mouth of Clear Creek.

METHODS OF TAKE

- No person shall kill or retain in possession any steelhead which has been hooked other than in the head. Any steelhead hooked other than in the head must be released unharmed.
- Any steelhead caught in a legal manner must be either released or killed immediately after it is landed.
- Steelhead may be taken only with barbless hooks. Bending the barb down to the shank of a single, double, or treble hook will meet this requirement.
- All fish that are hooked, landed, and not immediately released shall be counted in the limits of the person hooking the fish.
- Only steelhead which have been marked by clipping the adipose fin, as evidenced by a HEALED scar may be reduced to possession in the Snake, Clearwater and Salmon River drainages. EXCEPT, in the Snake River from the Idaho-Washington state line upstream to the Oregon-Washington state line, including the Clearwater River from its mouth to the Memorial Bridge of U.S. Highway 12 at Lewiston, steelhead EITHER with dorsal line measuring 2 inches or LESS in height OR marked by clipping the ventral fin as evidenced by a HEALED scar may also be reduced to possession.

CATCH-AND-RELEASE

- Any person may fish for steelhead on a catch-and-release basis in any water open to trout fishing EXCEPT in the Middle and South Forks of the Salmon River, their tributaries, and in the Salmon River from Lake Creek near Riggins to Long Tom Creek near Middle Fork Salmon River.

Only artificial lures or flies with SINGLE barbless hooks are permitted when fishing in catch-and-release waters. All steelhead caught in catch-and-release waters shall be released unharmed immediately.

However, once an angler has attained his bag, possession or season limit on those waters with steelhead limits he must cease fishing for steelhead including catch-and-release fishing.

TO RELEASE FISH UNHARMED:

1. Do not squeeze the fish.
2. Do not touch the gills or hold fish by gill covers.
3. Leave the fish in the water while removing the hook.
4. Use long-nosed pliers to rotate the hook from the fish's mouth. If the hook cannot be easily removed, cut the leader and release the fish.
5. If the fish is exhausted, hold it in an upright position in the water and gently move it back and forth until it is able to swim away.

Using these precautions will permit the fish to survive for another day.

Barbless hooks are usually not difficult to remove from fish. Barb (1) is easily bent down (2) by moderate pressure applied with pliers.

IDENTIFICATION OF SPECIES IN POSSESSION AND DURING TRANSPORTATION OR SHIPMENT

No person shall have in the field or in transit any steelhead trout from which the head or tail has been removed.

ANGLERS, WHICH STEELHEAD CAN YOU KEEP?

IS YOUR STEELHEAD MISSING A LEFT VENTRAL FIN?

IF K is...SAVE THE HEAD—
here's why:

The missing left ventral fin signals the presence of a small coded wire tag implanted in the nose cartilage of the fish. The tag is used in a variety of experiments designed to perpetuate the runs of steelhead into Idaho. Each tag assumes a great deal of importance. If your fish is missing the left ventral fin, remove the fish's head and return it to a local conservation officer or Fish and Game office (or freeze it until you can turn it in).

— Missing ventral fin

CLEARWATER RIVER above the Memorial Bridge — Only steelhead with a missing adipose fin (as evidenced by a healed scar) may be kept.

Missing adipose fin

SNAKE and LOWER CLEARWATER RIVERS — On the Snake River from the Idaho-Washington border upstream to the Oregon-Washington border, and the Clearwater River from its mouth to the Memorial Bridge of U.S. Highway 12 at Lewiston, you may keep steelhead with either a missing adipose fin (as evidenced by a healed scar), or a dorsal fin less than 2 inches high when fully extended, or a missing ventral fin. (As evidenced by a healed scar).

Dorsal fin under 2 inches

Missing adipose fin

Missing ventral fin

SNAKE RIVER above the Washington-Oregon border and the **SALMON RIVER** drainage — Only steelhead with a missing adipose fin (as evidenced by a healed scar) may be kept.

Missing adipose fin

STEELHEAD

"Steelhead" are defined as rainbow trout over 20 inches in length taken from the Snake River drainage below Oxbow Dam, the Salmon River

drainage (excluding lakes), the Clearwater River drainage (excluding that portion above Dworshak Dam and lakes), and the Boise River from its mouth upstream to Barber Dam.

PERMIT VALIDATION

When a steelhead trout has been hooked, landed, and reduced to possession, the angler must immediately:

- Completely remove one numbered notch from the permit;
- Look up the number code from the location code list and write it in the space provided; and,
- Enter the month and day the fish was caught.

For example, a fish caught from the Salmon River between the Middle and North Forks on October 22 would be entered as:

Fish	Month/Day	Location Code
1	10/22	15

REMOVE NOTCH

However, when a steelhead is released unharmed, as in catch-and-release fishing, the angler is not required to make an entry on the permit.

STEELHEAD HARVEST SURVEY

Steelhead harvest and angler participation are estimated by a telephone survey conducted within a few weeks after the season closes. You may be called and asked about your effort and success. Please save your permit until 3 months after the season has closed or until you are contacted by an Idaho Fish and Game caller.

SALMON RIVER BOATING PERMITS

Permits for boating the Salmon River between Corn Creek and Long Tom Bar from June 20 through September 7 are required. Contact the U.S. Forest Service, State Creek Ranger Station, for permit information — telephone 830-2211.
